Copper River Information Technology

Copper River Information Technology provides a simple, seamless, and transparent process to recover maximum value for displaced legacy IT assets.

The challenge to maintain current hardware solutions for Government Enterprise use is difficult enough; the disposition of legacy equipment is an unnecessary hurdle. Paperwork associated with decommissioning legacy equipment can create hours of challenging work.

As a recognized Alaskan Tribal 8(a) certified business, Copper River IT strives to keep our infrastructure costs reasonable, and our service delivery impeccable. Creativity, flexibility and value, *are* Copper River's strengths.

Our approach is simple; provide a clear process, accurate documentation, and high values for the remarketing of legacy IT assets.

Straightforward, All-inclusive Pricing

One of the greatest factors that can detract from overall value of remarketed systems is the shipping and logistics required to acquire the assets. Our asset value quotes include logistics, and shipping to provide a clear determination of net value. Our solution provides fixed value, and no surprises.

See reverse page for Copper River Asset Recovery Services.
