Copper River Information Technology

Information Assurance

Copper River Information Technology has a broad range of experience allowing us to implement total solutions for your project. Our focus is on communications systems implementation, premier information assurance management, and providing a superior staff-augmentation offering.

Copper River IT believes that in a net-centric world the security, protection and validation of data and systems is crucial to the missions of the Civilian and Defense departments and agencies within the federal government. CRIT offers our Federal customers a wide array of Information Assurance products and services.

In accordance with the National Security Agency's (NSA) and National Institute of Standards and Technologies (NIST) definitions of Information Assurance (IA) we recognize the five (5) tenants of IA as:

Availability
Integrity
Authentication
Confidentiality
Non-repudiation

Our solutions are built around this model. Contact us for needs assessment and to determine solutions to aid in your success!

Copper River Information Technology

Copper River Information Technology can perform assessment services and build solutions towards your agency's success. Our unique status and extensive cadre of security partners (software vendors, and service providers) allows us the flexibility to provide security analysis, vulnerability assessments, software integration, and policy rollouts to local offices, regions, or entire networks.

Vulnerability Assessments: Our certified security specialists can perform a comprehensive assessment of your network, systems and data to determine potential vulnerabilities.

Certification and Accreditation Services: CRIT engineers can perform C&A using DITSCAP and NIACAP processes.

Cyber Security Engineering: CRIT security engineers can perform services in security requirements development, security analysis, security infrastructure design, implementation, testing and evaluation.

Business Impact Analysis/Technology Impact Analysis: Based on system criticality and data dependencies, CRIT can work with your organization to quantify the impact of a data loss and the recovery time and recovery point objectives required to allow your organization to meet its mission goals.

NAICS Codes: 423210 | 423430 | 517310
